

1: ESL Yes No Question Games

A learning tool for reading with an innovative spin on the classic "true or false" test format. This wire-o bound book is equipped with switches that read yes or no.

Give each student a piece of paper. When everyone has finished, collect in the pieces of paper and mix them up. As the students stand up, grab a chair and remove it from the game. You could also just sit on a chair as the students stand up and then remove it after. The student left standing is out of the game. Repeat the procedure with another question and so on. The last student left in the game wins. Invite one student to the front of the class and give the student a slip of paper. Ask the student to secretly think of a verb and write it on the paper, e. Have you ever glugged? Do you glug every day? Are you glugging now? When a student thinks they know the verb, they call out their answer. The first student to guess the correct verb wins and scores a point. The winning student then becomes the next student to choose a verb. The student with the most points at the end of the game is the winner. Choose a student and ask that student to step out of the classroom. While the student is out of the room, hand a ring to one of the students. All the students in the classroom should see who receives the ring. Call the student back into the room. Does a boy have the ring? Is the boy tall? Does he have dark hair? Is he wearing a blue T-shirt? The student is only allowed one guess to name the person who has the ring. If the student guesses correctly, he or she gets another turn. If the student guesses incorrectly, the student who has the ring becomes the next person to step out of the room. Choose one student to come and sit at the front of the class. Write the name of a famous person or character on a piece of paper and give it to the player. If the students are unable to guess the right answer after 20 questions, the answer is revealed and a new student is chosen to come to the front of the class. Depending on the level of your students, you may need to write up some example questions to get the students started. Apart from that, the game is the same. Next, tell the students to put their heads down and close their eyes. Walk round the class and touch one student on the shoulder. That student has the virus. Now, ask the students to open their eyes. The aim of the game is to avoid catching the virus. After a few minutes, stop the game and see who survived. The student with the most points at the end of the game wins. When the students have finished, seat the students in a horseshoe shape and put a chair in the middle facing the horseshoe. Draw two columns on the board, one with a happy face heading and one with a sad face heading. Your job is to answer the questions without saying yes or no. Smiling is allowed, but not laughing! In turn, each student sits in the chair and tries to survive a question from each classmate, without saying yes or no, or laughing. If a student manages to do this, write their name under the happy face. If not, put their name under the sad face.

Hibernation Party Read This: One of the things animals do to protect themselves from cold weather and low food supplies is to hibernate either temporarily or all season. After reading and discussing the book, explore this winter adaptation by throwing a Hibernation Party. Have each child choose a hibernating animal to research. Animals that hibernate include bears, groundhogs, raccoons, skunks, snakes, and bees. Invite students to take turns sharing their drawings and some fun facts about their animals.

Fly South Read This: Many species of birds and insects fly south for the winter. One of the most visible migrations is that of geese. They fly in a V formation that helps them to conserve energy. Each bird flies a little lower than the one in front of it, reducing wind resistance. The V formation also makes it easier for the birds to keep track of one another and communicate. Take students out to the playground or into the gym and let them run in a V formation, taking turns being the leader as geese do. Next, provide them with paper, and demonstrate how to fold a paper airplane. Students can then decorate their planes to resemble geese.

Bee Dance Read This: Bugs and Bugsicles by Amy S. Like other animals, honeybees store food for winter. Take students outside on a cool day to try this experiment. Ask them to stand still for a few minutes and then rate how cold they feel 1 being cold, 10 being hot. Ask them to predict what will happen if they move around, and then tell students to shiver and move around like a bee. After one minute, have them stop and rate how cold they feel. Were their predictions accurate? Return to class and taste a variety of honeys and examine a honeycomb. Explain that the color and taste of honey depends on the flowers the bees visited.

Stocking Up Read This: As cold weather approaches and food sources start to diminish, squirrels and other rodents mice, rats, chipmunks, and beavers begin stockpiling food. They bury their food or hide it in hollowed-out trees or other safe places. Gather students in a central area and lay out a collection of acorns. Invite kids to count and describe the acorns, then to put them into a variety of sets—for example, those with or without caps, acorns with darker or lighter coloring. Invite them to come up with their own ways to group the nuts. According to the Food Allergy and Anaphylaxis Network, acorns should be safe for all children to handle. However, as always, check with parents first.

Mud Bed Read This: Toads and other amphibians bury themselves underground or in shallow beds of mud to protect themselves from the cold. To illustrate how mud can be a good heat insulator, set up an experiment at your science station. Fill two large bowls about two-thirds full with ice water. Next, fill a quart-size plastic bag with fresh mud. Have students put one of their hands inside a smaller plastic bag or wear a plastic glove and place that hand inside the bag of mud. Seal the bags at their wrist using tape or a rubber band. Have kids put one hand in each bowl and observe which hand feels warmer.

Huddle Up Read This: Polar Animal Adaptations by Lisa J. Some animals lay their eggs in winter and must work together to keep themselves and their eggs warm. Emperor penguins are a great example. Winters in Antarctica are especially brutal. The temperature often drops below minus 50 degrees Fahrenheit and the wind blows constantly. To keep warm, the males who guard the eggs huddle together and take turns being in the middle. Pick a cold, windy day to demonstrate this survival technique. Take students outside, and have them stand close together in a group. Who is feeling warm? Who is feeling cold? After a few minutes, have them move around so the kids on the outside of the group are now in the middle.

Match Game Read This: Animals do all kinds of things to survive the winter. The three main techniques are hibernation, adaptation, and migration. After studying the ways different animals prepare for or survive winter, play a matching game. Create a deck of cards using blank note cards. Mix up the cards and lay them facedown. Have students take turns drawing two cards at a time to see if they can match an animal with what it does in the winter.

Based on an Iroquois tale. **Miki** By Stephen Mackey. Expressive, soft-focus illustrations show the magical quest of Miki, cheered on by friends Penguin and Polar Bear. **Foxes in the Snow** By Jonathan Emmett. Mischievous fox cubs Alfie and Bonnie go outside their burrow and must figure out how to get back. **Nonfiction Animals in Fall: Preparing for Winter** By Martha Rustad. A picture-book format makes this info-packed book a favorite read for kids and teachers.

Sams II and Jean Stoick. A photo-realistic journey that captures intimate moments as young animals get ready for their first snowfall.

WeAreTeachers Staff on September 27, Reading comprehension is one of the most complex skills to teach. Students will only succeed in other subject areas and make a lifelong habit of reading for pleasure if they understand what they are reading on an ingrained level. Many factors go into the development of reading comprehension, including building an extensive vocabulary, asking questions, making connections, and visualization. Use them as models for your own teaching and pass them along to a teacher friend!

Self-Monitoring Anchor Charts for Reading Self-monitoring is key for success in reading comprehension at all levels. Giving students some questions to ask themselves as they read is a great first step toward understanding. Life in Fifth Grade 2. Understanding What Reading Looks Like Setting expectations for what reading really looks like can help lay the groundwork for comprehension in this reading anchor chart. Head Over Heels for Teaching 4. This anchor chart for reading is a great place to start. Creating Readers and Writers Giving fun names to decoding strategies can help students feel less intimidated by new vocabulary. Teaching With a Mountain View 8. Building Fluency Anchor Chart Fluency is another important part of reading comprehension. When students are robotic in their reading expression and pacing, they have trouble understanding meaning. Step Into Second Grade 9. Tackling a Text While this anchor chart is specifically for test passages, we like the approach of breaking down a longer piece of reading into specific tasks to aid comprehension. The Good Life Retelling Anchor Chart Retelling or summarizing is an important check on comprehension—can the student identify the main events and characters of the story? This anchor chart nails the concept. The Tchy Teacher Finding the Main Idea Understanding the main idea is one of the first higher-level tasks of comprehension: Life in First Grade The Teacher Next Door This chart will help them pick it up and then implement it in their own writing, too. Character Journey Anchor Chart Encourage your students to think about how a character changes from the beginning to the middle to the end of a story. Who was involved in the change? What did the character learn along the way? Asking and Answering Questions Questioning is at the heart of comprehension, helping students to bridge the gap between surface-level understanding what happens in the story and deeper meaning the theme or moral. Going Deeper Anchor Chart Teach your students the difference between basic yes-or-no thin questions and more involved thick questions. When students can answer harder questions about the story, their level of understanding will go through the roof. Life in Fifth Grade Cause and Effect Anchor Chart Understanding cause and effect is another higher-order comprehension task. Making Connections You can be sure kids comprehend what they read when they can start connecting it to themselves and to the world around them. Teacherific in 2nd Grade This anchor chart does a great job explaining.
