

1: Zoom MRS manual

ZOOM MRS Recording the drum sound (Rhythm recording) The MRS allows you to record the drum kit sound onto any track. This function is called "rhythm recording". To use the function, proceed as follows.

Recording hobbyist for 25 years. Acoustic with electric guitar mix and keyboards. Back to Product Information Sound: My experience is that the recorded track sounds exactly like how it went in. Clear definition between the tracks. The internal effects are not too bad, especially if you tweak them some. I am very happy with the sound quality. This is a small personal studio, it is not meant for recording more than one instrument at a time. I found the features to be great. You can do most "anything" within this recorder. If I had to say something negative This is slightly inconvenient, but understandable due to the size of the unit. I tried to download the software to my Mac, but my OS It may work, but I needed to unstuff the file and my Mac, recently bought, does not have that ability I suppose. I would have to purchase something to unstuff the software apparently. Works fine with Microsoft XP. The non converted file is proprietary, so the software from ZOOM is needed. The external microphone is sensitive and works well. I have used this option and it does work fairly well for laying down inspiration quickly if need be, but it is not my preferred method of capturing something. Mastering within the machine is an excellent feature. Adding recorded songs to a sequence play is very nice too. The virtual tracks, though common in all digital machines, it a wonderfull way to get something good without having to re-do a track. I use this feature all the time. Though you have to choose the best take, with bouncing and the virtual tracks combined, this enables you to layer pretty deep. An undo button would be great on any recorded track though. It is easy to multitrack though, so perhaps that is what the thinking was. It was tough to do anything deeper than just laying down tracks from the get go. The manual was difficult to understand. I now find it relatively easy to record the tracks and add effects and do a master track. The bounch function works well. Track 7 and 8 are stereo tracks so there is only really 4 "single" tracks. For most of my needs, I just bounch the recorded tracks to a stereo track and instead of wiping out trackes to gain more space for recording, I use the vidual tracks to add to the mix. Seems obvious I know, but it opens up the machine for lots of layering. I think it is very well made. It has hit the floor a couple of times I have taken it to band practice, so it is very portable. I am impressed overall. I think it is worth more than the going price. It is an excellent value. For a single musician, you can record complete songs that sound very good. I emailed Samson about my the stuffed file and OS system I have, and never got a reply. Samson was the only contact I could find. The ZOOM website sent me there. Regardless, a response is always appreciated no matter how weak the question. How it looks is secondary to me. I have had it for a year and was planning on using it as long as it worked. Funds were limited first time around and this was a great deal. Given the same initial circumstances, I would buy it again. My uprade will be another ZOOM machine and basically I want to upgrade because a internal CD burner and the abilty to record more than one instrument at the same time would be very nice.

This recorder has been a gem in my personal collection!! I hate having to sell it, but I have new endeavors This recorder is in fantastic shape, has the owners manual, and even some adapters that came with it. I guarantee that you will have fun with this!!!! Tracks sound sweet thanks to the MRS has 8 mono digital recording tracks--but the drum machine uses its own discrete stereo track. Each of the 8 mono tracks and the stereo master track have 10 virtual takes per track. These can be used to record up to 10 different takes of a guitar solo or vocal riff, allowing the user to pick the best for mixing the final song. Virtual takes on the master track allow you save 10 different mix downs before you commit one to CD. The MRS has 2-track simultaneous input capability. These editing functions also help out with the sampling and looping functions the MRS offers. The is loaded with hundreds of pre-recorded beats, and each one can be edited and re-saved. There are more than drum and percussion sounds built-in, including 43 different drum kits, each with 24 different sounds. The MRS has a huge palette of killer effects for guitars, instruments and vocals. Every track has editable track parameters that include: EQ high, EQ low, pan, chorus, delay, reverb. These functions are also automated, allowing the user to make automatic changes on any given track mid-song. Parameter settings are saved as "scenes".
